

API Integration for IconCMO!

FOR IMMEDIATE RELEASE

August 2010

Moorhead, MN — Icon Systems has released APIs (Application Programmer's Interface) for IconCMO. Churches, developers, and strategic partners can interact with the data on the IconCMO main database. Some applicable solutions would be website integration for calendar, online directory, e-mail integration, event registration, custom reports, etc.

An API runs silently in the background. They are completely invisible to software users. They're primary role is to provide a channel for applications to work with each other to make sure the user gets the required functionality and information.

For the Church - you can now integrate a church directory or calendar of events directly into your website from information stored in IconCMO, using one of our pre-created web services demos. You can also ask developers and other companies to use web services to integrate with IconCMO.

For the Developer - you can now create custom functionality from information stored in IconCMO. Please see the new Web Services-> Setup-> Developer Center menu item for all the information you will need to develop software solutions around IconCMO's web services.

###

About Icon Systems Software:

For more than 18 years, Icon Systems has been developing high-quality software for non-profit organizations. The company was founded in 1992 by Robert Gifford, who previously headed research and development for Great Plains Software and helped create Great Plains Accounting and Dynamics, two highly popular accounting software systems. Icon Systems' software is currently used by thousands of non-profits nationwide. Since its founding, Icon Systems has become legendary for its commitment to high-quality products as well as outstanding service and support. To find out more please visit Icon Systems. Visit Icon Systems.
