

Partnership between Icon Systems and Community Auction Services!

FOR IMMEDIATE RELEASE

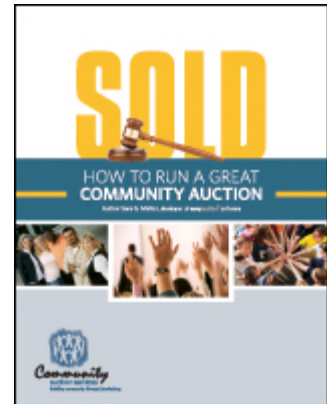

September 2010

Moorhead, MN — Icon Systems has announced a software integration with Community Auction Software that is developed by Community Auctions Services LLC. The software will import the membership from IconCMO into the auction software. This eliminates duplicate data entry for organizations that have to input this each time into their auction software from their church database.

###

About Community Auction Software:

Sara Mellen has over 25 years working with computer systems, for both large companies and with her own consulting firm, Mellen Computer Services. In 1999 she became involved with her church's auction, where she developed an auction data system using Microsoft Access. Since that time, she has helped a number of nonprofits run a more effective and efficient auction using her knowhow and data system. Her web-based system, EasyAuction, is the end result of her 12 years of experience running auctions for churches, schools and other nonprofits.

About Icon Systems Software:

For more than 18 years, Icon Systems has been developing high-quality software for non-profit organizations. The company was founded in 1992 by Robert Gifford, who previously headed research and development for Great Plains Software and helped create Great Plains Accounting and Dynamics, two highly popular accounting software systems. Icon Systems' software is currently used by thousands of non-profits nationwide. Since its founding, Icon Systems has become legendary for its commitment to high-quality products as well as outstanding service and support. To find out more please visit Icon Systems.
